

RPNM: PRESIDENT BIDEN CONTINUES TO FAIL AMERICA WITH LATEST DISMAL JOBS REPORT

NOVEMBER ECONOMIC REPORT MARKS WORST MONTH FOR JOB CREATION IN 2021

Albuquerque, December 3—The latest national jobs report again shows that the U.S. economy under the Biden administration keeps stumbling, a sign that the President's economic policies are weak.

The report reveals that the economy added just 210,000 new jobs in November, much lower than the 550,000 economists had predicted. In 3 of the last 4 months, the economy has added fewer jobs than expected.

We are still 8.2 million jobs below the pre-pandemic trend, and this latest economic indicator provides little consolation to the 3.9 million Americans who lost their job during the pandemic and have yet to get it back.

Biden's vaccine mandates would only worsen the labor shortage and impact more than 100 million Americans. Reports show that 72% of unvaccinated workers will leave their jobs if they are required to get vaccinated – meaning up to 9% of the current workforce would leave their jobs.

Meantime, 3.6 million workers were unable to work in November because their employer was closed or had lost business because of the pandemic.

Joe Biden continues to fail America.

Biden has created a perfect storm as high inflation is expected to last well through 2022 and the supply chain crisis continues.

“President Biden continues to fail American workers and families,” said Republican Party of New Mexico Chairman Steve Pearce. “This latest report shows his economic policies and strategies just aren’t working, and his vaccination mandates are killing our nation’s workforce. Our economy is in tatters. Biden will always put a positive spin on any report, but the truth is America is out of work, and Biden has created this crisis. Under his watch, our economy has been crushed and our economic strength and reputation have been weakened.”
